DFS Aviation Services

A brand of experience

ATS Supervisor Training

Managing day-to-day operations

Overview

In today's ATM environment, ATS supervisors serve as the **crucial link between air traffic controllers and ATM managers**. ATS supervisors maintain safety and efficiency in an operational and tactical environment. Often called upon to make critical and on-the-spot decisions, ATS supervisors are required **high-quality and focused training**.

This training of DFS Aviation Services provides **potential and existing ATS supervisors** with the skills to **maintain situational awareness in a dynamic environment while applying best-practice leadership principles**. The participants also receive input on **specialist topics** that are relevant for a supervisor in addition to operational supervision.

Course

Objectives
- Enrich the knowledge about the duties of a supervisor
- Learn current working methods and tools
- Benefit from professional exchange and advanced training

Content
