

APRON MANAGEMENT SERVICES (AMS)

Turning apron complexity into performance

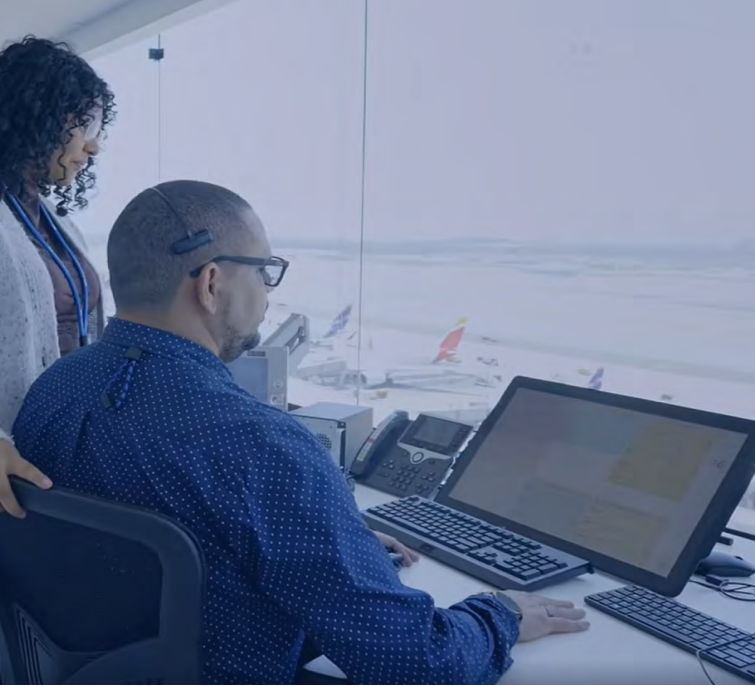

Apron Management Services (AMS) help airports turn apron complexity into safer, smoother and more efficient operations. By coordinating apron movements and reducing the risk of collisions with aircraft and obstacles, AMS protect on-time performance and unlock greater use of existing airport capacity.

DAS provides Apron Management Services around the world that optimise apron and airside operations, helping airports and aerodrome operators run safer, faster, and more predictable turnarounds.

Our AMS approach coordinates aircraft stand planning, apron movements, and stakeholder communication to reduce delays, improve situational awareness, and support compliance with applicable safety and aerodrome requirements worldwide.

DAS SERVICES

- **Apron Management Services (AMS) provided by DAS staff** on-site - also possible as a digital/remote service
- **Ensuring regulatory compliance** with local and international regulation, such as ICAO Annex 14
- **Operational expertise** from DFS Group (German ANSP) and international ATC operations
- **Movement coordination on aprons and taxi lanes** to keep apron operations safe, smooth, and on time
- **Compliance and operational assurance** through monitoring, reporting, and continuous improvement
- **Staffing, training and competency management** for apron management roles
- **Capacity increase support** through optimised apron movements and turnaround flow
- **Transition support from ATC to a dedicated Apron Management Unit** (concept, procedures, training, phased handover)

YOUR BENEFITS

- » **Safer airport apron operations** through clear procedures, task allocation, and coordinated stakeholder communication
- » **Faster turnarounds** by prioritising and improving real-time decision-making
- » **Reduced delays and disruption** with better situational awareness across airside operations
- » **Improved compliance and assurance** aligned with applicable aerodrome and safety requirements
- » **Scalable service model** to support international airports of different sizes and operating concepts
