DFS ATS Suite - Enhanced by DFS Aviation Services & CS SOFT

We have brought together the majority of our ATM systems and tools for you in our DFS ATS Suite. This modular kit offers flexible, integrated ATC automation components suitable for every ATM environment. Be the first to see details in our [video](#).

PHOENIX WebInnovation

Our latest innovation is an integrated, web- and cloud-based air traffic management system that follows the modern “Software as a Service” approach (SaaS).

Arrival Manager (AMAN)

The Arrival Manager (AMAN) is a real-time arrival management system that has been operationally proven in the field for more than 20 years. The modular system can automatically change operating scenarios and makes up-to-date planning suggestions to the controller.

Remote Tower Control (RTC)

Get the latest update on the DFS Remote Tower Control solution, which has been operational at Saarbrücken Airport for more nearly three years now. Discover the global activities of our joint venture FREQUENTIS DFS AEROSENSE to revolutionise tower control.

UAS Traffic Management (UTM)

Get to know our UAS Traffic Management System (UTM), which is operational in Germany. The UTM receives and displays UAS position data with relevant manned traffic. The UAS are equipped with an LTE module with a SIM card.
